Claim 14. An assembly for transferring current, the assembly comprising:

at least one electrically conductive slip ring;

a plurality of electrically conductive brushes for supplying current to the at least one slip ring, each of the electrically conductive brushes being coupled through an electrical connection to [adjacent ones] a respective one of the electrically conductive brushes through a common electrical interface;

at least one electrically conductive lead coupled to the common electrical interface;

a plurality of inductors, each situated on a respective one of the electrical connections.
